
HIP2P Network Video Camera Client Terminal User Manual

Document version: 5.1

Preface

Thank you for using our company's products.

The network video camera client terminal is used to implement centralized monitoring, storage, management, and control of all front-end network video surveillance devices (including network video servers and network video cameras). The management software can manage up to 128 front-end network monitoring devices at the same time; it can perform functions such as setting and control of any single device; supports 1/4/6/8/9/16/25/36 split screens on a single-screen display, two-way voice Intercom, log retrieval and other functions. It has powerful features, is very user-friendly, easy to operate, and makes it very convenient for users to manage large-scale remote network monitoring systems.

Disclaimer:

1. The content described in this manual may differ from the device version you are currently using. If you encounter problems that cannot be solved by using this manual, please contact our technical support department or product supplier.
2. The content of this manual will be updated from time to time, and the company reserves the right to do so without prior notice.

1. Installation Instructions

1.1. Installation Requirements

Hardware environment:

1. Pentium IV series, CPU frequency above 2.0G
2. More than 2G memory
3. Hard disk 120G or higher
4. Display resolution of 1024x768 or higher

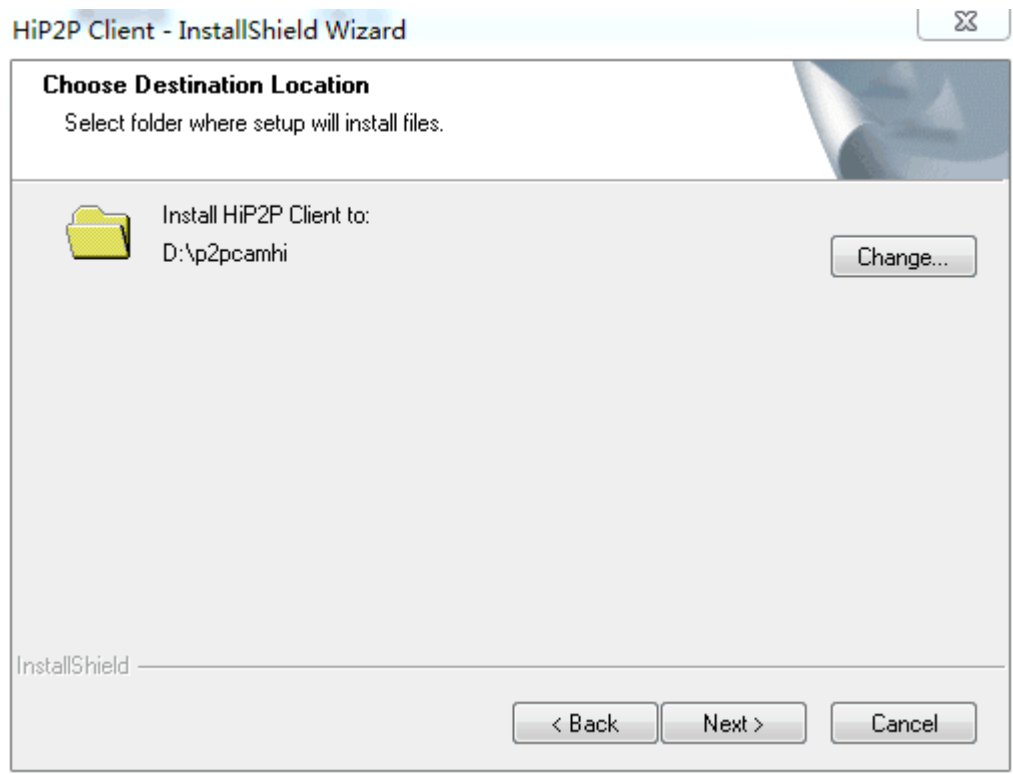

Software environment:

Windows2000/WindowsXP/Windows2003/WindowsVista/Windows 7/8/10,
Windows XP recommended

1.2. Installation Steps

Double-click the installation package and select the language to install :

After selecting the installation path, please do not install it on the C drive. Click "Next" and the installation is complete.

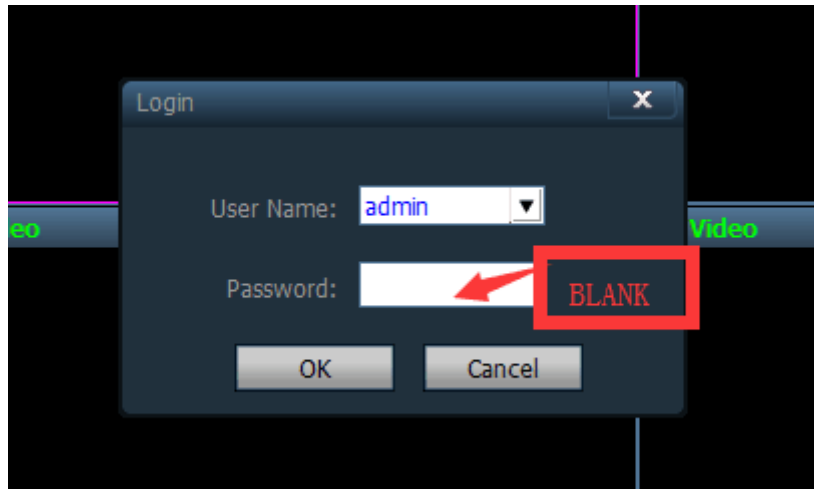

After installation, the following icon will be displayed on the desktop :

2. Client Terminal Detailed Description

2.1. Login & Description

【Login】 When logging in, the default user is admin, the password is blank, click "ok" button to enter the client's main interface

【Exit】 Only users with admin authority can exit the client terminal, users with user and guest authority cannot exit the client terminal

When exiting the client, you need to enter the username and password of the administrator to log out of the client

2.2. Software Interface Description

The software interface is as shown in the figure above, divided into 6 major blocks :

1. System button bar

2. Tab bar

3. Device tree

4. Real-time preview

5. PTZ Control

6. Alarm information list

◆ **System button bar:**

 Help button, click to open the client terminal usage instructions

 Hide button, click to hide the software within the system tray

 Maximize button, click to maximize software to use the entire screen

 Exit button, click and the software will pop-up an exit prompt

◆ **Tab bar:**

LOGO information

Click to switch to the image preview menu

One-click to add device

Click to switch to video playback menu

Click to switch to remote recording playback menu

Click to switch to settings menu

Click to switch to log operation menu

Logout users and switch users

Click to exit the client terminal

◆ **Device Tree:**

【List mode】 Based on user-configured list hierarchy for display area, settings and channels

【Current screen】 Displays the device connected to the current screen, it is only displayed in list mode

◆ **Real-time preview:**

Electronic zoom button, click to draw an area on the screen with mouse, and you can zoom onto that area

Voice intercom button, select the intercom window that you need, and click the

intercom button, the window status bar will display , and you can use the voice

intercom; only one set of voice intercoms can be opened at any one time.

Sound listening button, click to open the sound monitor, the window status bar will

display , click again to exit the sound monitor. Sound monitoring of multiple devices can be turned on at the same time.

Video button, after selecting the window to be recorded, click video button to open manual recording, window status bar will display , click again to exit manual recording

Picture capture button, select the window you want to capture pictures from, click the capture button to start picture capture, if you click on the snap button, you can capture up to 2 pictures in 1 second

Multi-screen selection button, click to select multi-screen image display, select 1, 4, 6, 8, 9, 16 screen displays

Full-screen display button, when clicked, the real-time preview area can be displayed in full screen mode

List of alarm information, shrink or expand button; click the alarm information list to shrink it, click the alarm information list again to expand it

2.3. Device Management

2.3.1. Add Device

Before using the client software to operate, you need to add and configure the device. Click the "Settings" button in the tab bar to enter the device management page.

【Add a list tree】

- ◆ When the software is running initially, the list tree is empty by default. Click the "Add Area" button and the "Add Area" dialog box will pop up. Enter a name in the field name field and click OK to add an area to the list tree. Since the added area is the first area to be added, previously this area was empty.

Note: Currently, up to 128 areas can be added to the list tree

Add an area to the device tree

Modify the name of the selected area

Delete selected area

Manually add device serial number

Click to pop up editing device dialog

Delete selected device

Add Add the searched device to the selected area

Search Click to search for LAN devices

Select All Select all devices in the search list

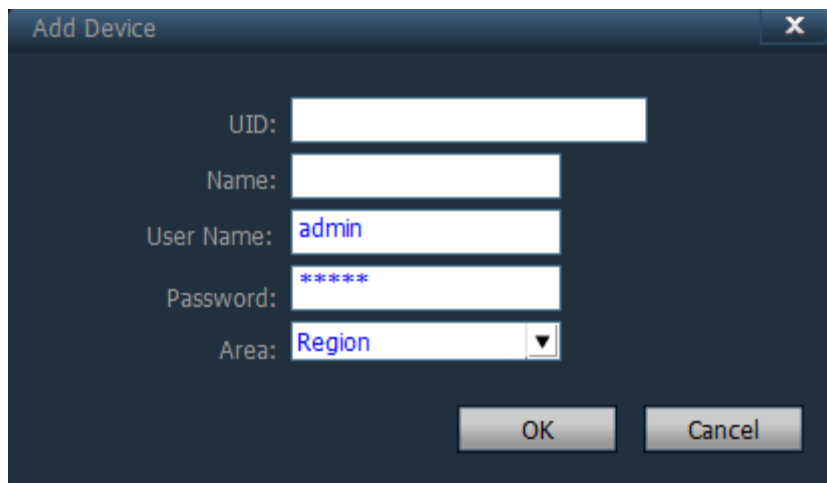

【Add device】

◆ Search LAN search to add device:

Click the search button, the client will search for all LAN devices, select the device to be added in the search list, select the area and click **Add** button to add device, and you will then add the selected device to the area.

◆ Manually add device, suitable for when cameras and computers are not on the LAN:

Click **Input UID** button to pop up the Add Device dialog box, as shown in the following screenshot

【UID】 Device UID code, each device has a different UID code, UID is above the device's tag.

【Name】 The name of the device, can be customized, device name have input of up to 15 Chinese characters. **(Note: After entering the name, only the device's name is displayed on the device tree in the preview window. The device's UID is not displayed)**

【User name】 The user name of the device, the default is admin

【Password】 The password of the device, default is admin

【Area】 The display area of the device

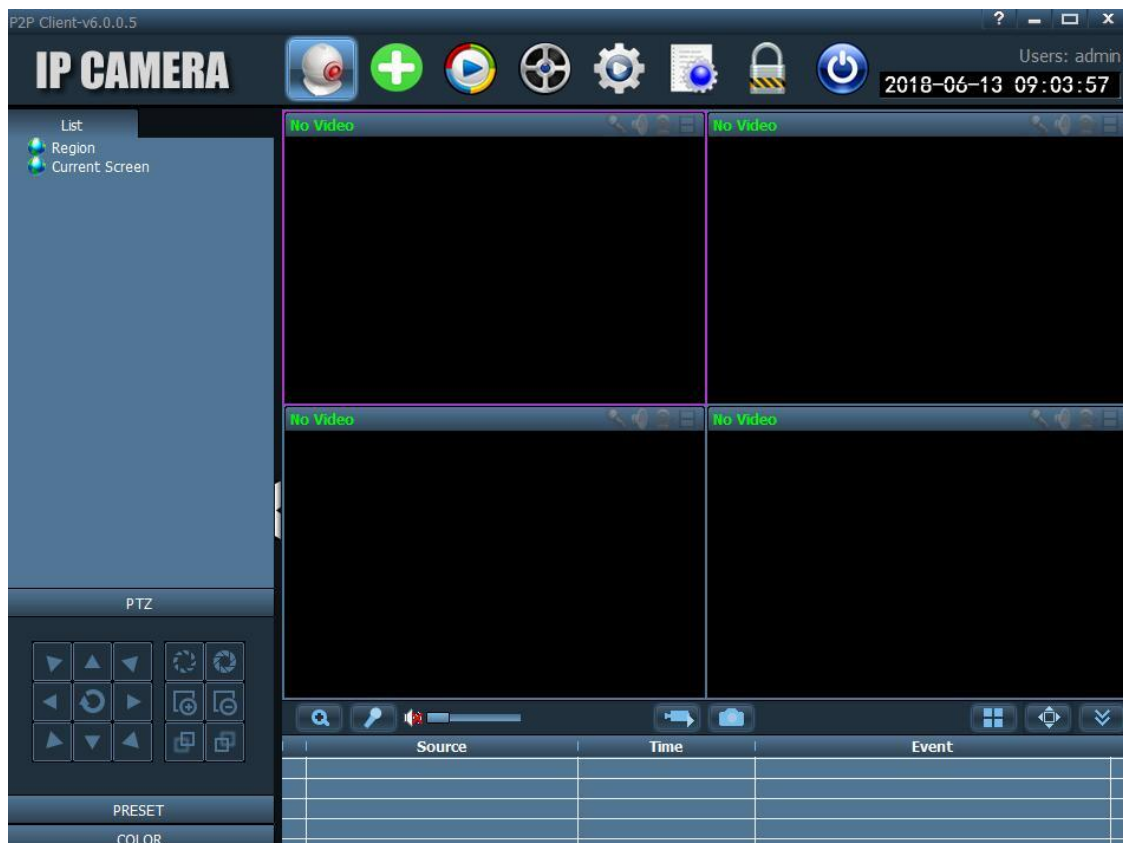

Fill in the required information and click the OK button to complete the device addition.

2.4. Image Preview

After the device is configured, click the "Preview" tab in the tab bar to return to the main monitoring interface. The device tree is displayed by default in the form of a list. Clicking "Group" and "List" on the device tree can switch between displaying group and list information.

Display default is 4-screen split display, and it supports up to 36 screen splits.

The maximum screen division is optional, there are 16/25/36 three screen modes, the higher the screen numbers, the higher the host's performance must be increased; for 25 or 36 screen display, it is recommended to use a more than i3 CPU, standalone graphics card.

Display screen description:

No Video: Indicates that the channel is not connected to the device. If connected, the OSD information of the device will be displayed.

: Intercom status, when the icon becomes , indicates that the channel is talking, otherwise the channel does not have an intercom enabled.

: Listening status, when the icon becomes , indicates that the channel is listening, otherwise the channel is not listening.

: Recording status, when the icon becomes , indicates that the channel is recording manually; when the icon becomes , indicates that the channel is doing a scheduled recording.

Double-click device UID or name in list mode.

Double-click the UID or name, or drag the UID to the window to display the image. (When device is not connected, it will display status as offline).

After device is connected, a blue triangle  is displayed on the UID or name, if the device displays , it indicates that the device is not connected. If the device displays , it indicates that the channel is recording.

Right click on any area,

【All connections】 Connect the device in selected area

【Start area manual recording】 Start the selected area device manual recording

【Stop area manual recording】 Stop the selected area device manual recording

【Image quality】 According to different network environments: Choose different picture quality in stable HD

【All automatic adjustment screen】 The selected area device automatically adjusts the proportion of the screen display

【Full screen display】 The selected area device displays the image according to the size of the split screen

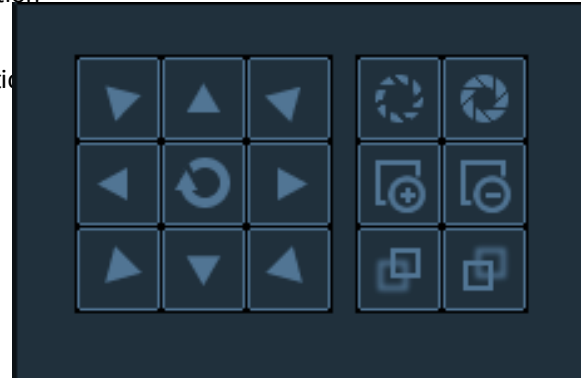

Note: After the image stops displaying, the device is still connected. If the device has started the video recording function, the device still keeps recording after the display stops.

2.5. PTZ Control(make sure your camera support this function)

2.5.1. PTZ Control

You can use the arrow keys to control the pan tilt in 8 directions. You can select the speed of the pan tilt by dragging the slider bar. “-” Indicates that the pan/tilt rotation speed is slow, and “+” indicates that the pan/tilt rotation speed is faster.

-  Aperture expansion button, needs lens support to function
-  Aperture reduction button, needs lens support to function
-  Focal zoom in button, needs lens support to function
-  Focal zoom out button, needs lens support to function
-  Front focus button, needs lens support to function
-  Back focus button, needs lens support to function

2.5.2. Preset

PTZ settings allow the user to configure Presets. Preset allows the user to designate specific PTZ positions for the camera. To create and manage presets, follow the steps below:

The client supports a maximum of 256 preset settings. Please check the number of preset points supported by the camera for the number of presets that can be used.

【Preset point settings】 Select the preview window that needs to set the preset point, turn the camera to the position you need, then select the preset point number, click the “Set” button, the preset point is set successfully.

【Preset point transfer】 Select the preview window that needs to transfer the preset point, then select the preset point number, click the “Goto” button, note that you must carry out preset point settings before selecting to transfer.

【Preset point delete】 Select the preview window needed to delete the preset point, then select the preset point number to be deleted, click “Del”, and the preset point is successfully deleted.

PRESET	
NO.	PresetName
001	Preset001
002	Preset002
003	Preset003
004	Preset004
005	Preset005
006	Preset006
007	Preset007

Goto Set Del

2.6. Recording Management

2.6.1. Scheduled recording

The screenshot displays the 'Record Management' configuration window. It features a sidebar on the left with menu items: Device Management, Parameter settings, Record Management, Linkage Alarm, User Management, and Other Settings. The main content area is titled 'Region' and includes a checkbox for 'Enable the plan of record'. Below this is a calendar grid with days of the week (SUN to SAT) on the vertical axis and half-hour intervals (0 to 23) on the horizontal axis. A 'Copy to all' dropdown and 'Copy' and 'Save' buttons are positioned below the calendar. Underneath is a table for selecting recording disks:

Disk	Total size(GB)	Available size...	Path
<input type="checkbox"/> C:\	50.000	3.144	C:\TRecord\
<input checked="" type="checkbox"/> D:\	61.786	24.241	D:\TRecord\

At the bottom of the window, there are several settings:

- General Record Length: 5 Min
- Alarm Duration Time: 10 Sec
- No hard disk space coverage: Yes
- Record Format: 264

A 'Save' button is located at the bottom right of the configuration area.

In the tab bar, select "Settings" - "Record Management" - "Enable scheduled recording" as shown above:

SUN ~ SAT represents a week, in days; 0 ~ 23 represents a day, in half hour intervals.

【Start scheduled recording】 Select the channel and click the left mouse button to drag a green block in the schedule table as shown in the above figure. The range of the green block is the time period of the scheduled recording. After setting the time period, click Save.

【Close scheduled recording】 Cancel the enable the plan of record, click Save; or cancel the green block in the schedule and click Save. To cancel the green block: Just left click and drag the green block using the mouse to cancel the green block.

Note: If the scheduled recording time of all devices is the same, just set one device and click Copy and Save, and all devices will have same start time scheduled for recording.

【Normal video length】 The length of a single video file, by default, is set by the system as 5 minutes.

The size of a single video file can be set from 1 to 30 minutes in length. If you modify the video length, please modify and save it after the normal video length.

【Duration of alarm】 The duration of the alarm recording is 5-60 seconds, the default is 10 seconds.

【Remaining disk recovery space】 The available range is 1G~50G. When the disk space is less than the setting range, it will start to jump to another disk to continue recording or delete the recorded file of the earliest date (the default recovery is 10GB).

【Video type】 264 and AVI two video types, if video type is 264, then you must use the manufacturer's player to playback video.

【Full disk coverage video】 Select "Yes" to delete the recording file of the earliest day when remaining disk space is less than the set disk space. Select "No" to stop recording when the remaining drive space on the disk is less than the set disk space.

【Video path】 After the client is installed, the client software automatically detects the hard disk of the machine and displays it in the list. The default video is recorded to the D drive.

2.6.2. Manual recording

Select window, click  button or right click the window to select recording, for video length and path settings, please check scheduled recording.

Note: 1. The client supports up to 24 drive characters, meaning that the memory can connect up to 24 drives

2. When the icon  is displayed on screen, indicates that channel is making a scheduled recording; when the icon  is displayed on screen, indicates that channel is making a manual recording.

2.7. Local recording Playback

2.7.1. Time Search Playback

Video playback button, click this button to continue playing when the video playback is finished

Stop play button, click this button to stop playing during video playback

Single frame play button, click this button to play single frame during video playback, one frame per click

Image capture button, select the playback window and click this button to capture an image and save it to disk

Electronic zoom button, select this button during video playback, and then draw the enlarged image area in the window

Full screen button, select this button and the image window area will go to full screen display, if you need a single window full screen display, please double click the corresponding window

During video playback, select the playback speed through the drop-down box to play; the default is normal speed playback

Sound button, you can choose whether to turn on the sound during the video playback, the default is sound off

【Video playback search】

Step 1: Select video file type and search time.

Step 2: Select the window to be played back, and select the device channel to be played back from the list tree.

Step 3: If there is an eligible video file within the selected time range, it is displayed on the time axis panel.

Step 4: Double-click the device channel to play back the video.

2.7.2. Search File Playback

Step 1: Select video file type and device channel.

Step 2: Select search time and click "Search" button, the system will display eligible video files in the device tree.

Step 3: Select the playback window and double-click the video file to playback

Video file playback supports simultaneous playback of the same video file in four windows.

2.8. Remote recording Playback & Download

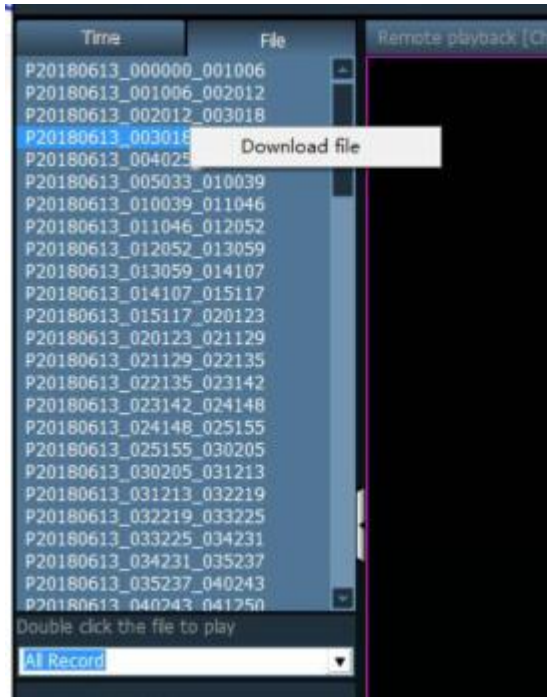

2.8.1. Remote recording Playback

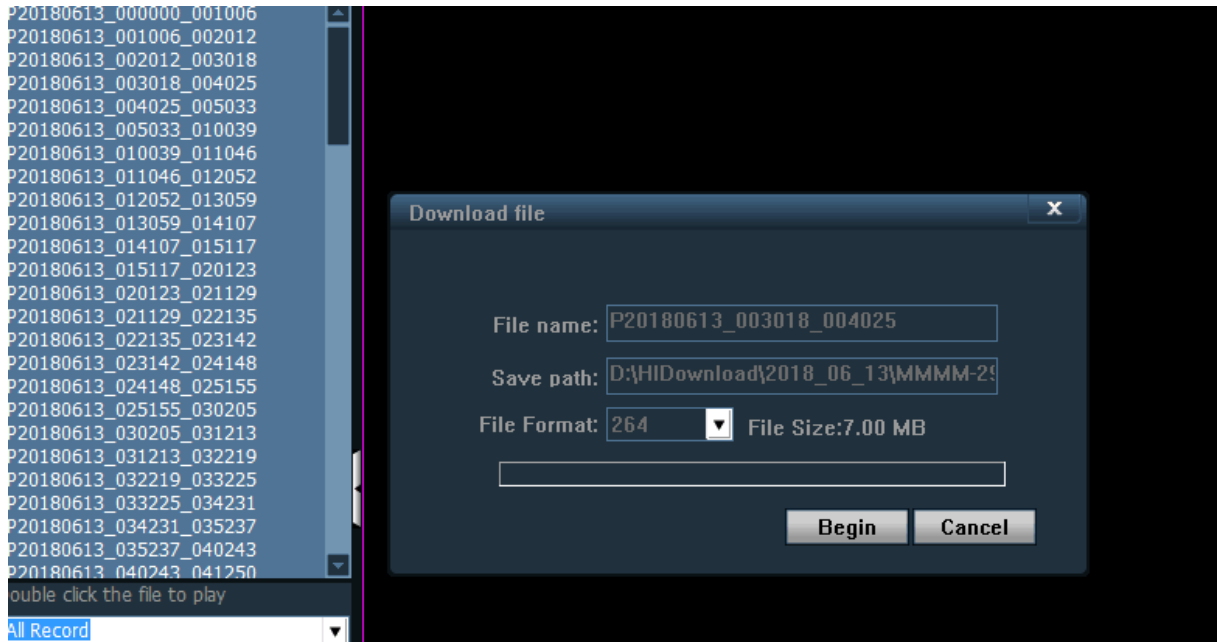

You can remotely play back the timer recording or alarm recording on the SD card, select the channel, date, start and end time of the playback; then click Search to play back the video in the SD card (remote playback requires the device to be connected, if not connected, clicking Search Button will indicate that the device is not connected).

2.8.2. Remote recording Download

After the remote recording file is searched, right-click on the video file to be downloaded. The Download File button will appear. Click to open the download menu. Click Start, and the video file starts downloading. (Video file download requires camera firmware version support)

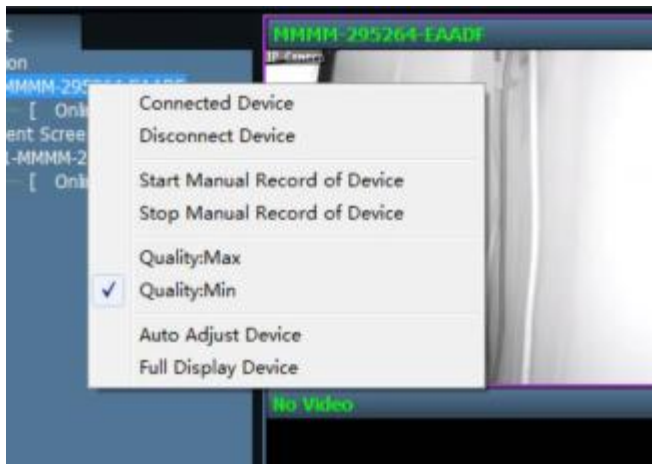

2.9. Parameter Settings

Before modifying the device parameters, please connect the relevant device as shown in the right figure:

Connect device

2.9.1. Video

- ◆ **Video Coding:** Frequency, Video Coding can be set.
- ◆ **Video parameters:** Video resolution, stream type, bit rate, frame rate, main

frame interval, video encoding control, and encoding quality can be set.

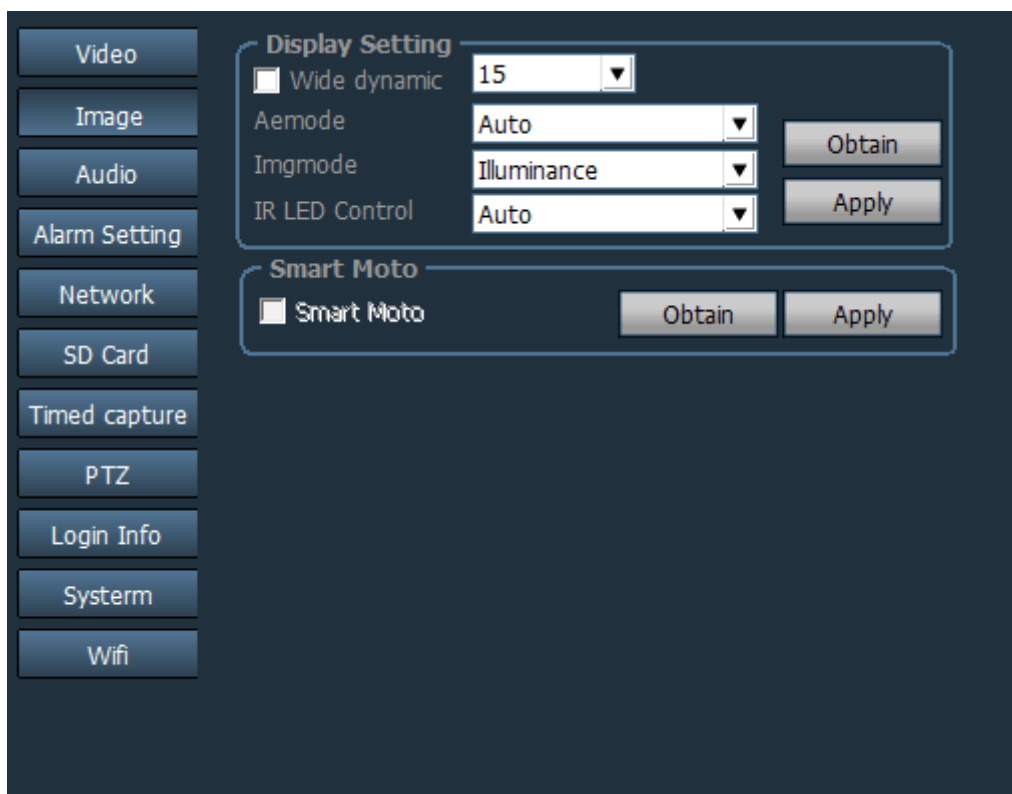

- ◆ OSD setting: Superimposition name, superimposition time can be set.

Note: If the device is connected to high definition, the resolution is the resolution of the main stream, if the connection is standard, then the resolution is the resolution of the secondary stream.

The screenshot shows the configuration interface for a HIP2P Network Video Camera. The interface is organized into a sidebar on the left and a main configuration area on the right. The sidebar contains the following menu items: Video, Image, Audio, Alarm Setting, Network, SD Card, Timed capture, PTZ, Login Info, System, and Wifi. The main configuration area is divided into three sections:
1. **Video Code**: Frequency is set to 50HZ, Video Coding is set to mainprofile.
2. **Video Param**: Resolution is 640*352, Stream Type is Sub Stream, Bit rate is 1536 (range 32-2048), Frame Rate is 25 fps, Key frame interval is 50 (range 2-150), Bit rate control is VBR, and Image quality is 1.
3. **OSD Setting**: Time OSD and Camera Name are checked, and OSD Name is IP Camera.
Buttons for 'Apply' are present for each section, and an 'Obtain' button is at the bottom right.

2.9.2. Image Parameters

- ◆ Width dynamic: Select the frame at the front of the width dynamic box, indicates to turn on width dynamic; width dynamic level options are between 1-30.
- ◆ Exposure mode: can be set to three modes: automatic, indoor, outdoor, the default is automatic mode.
- ◆ Image priority mode: can set illumination priority, frame rate priority.
- ◆ Infrared light control: can be set as automatic, on, off; when on is selected, it will be in black and white mode; select off and it is in color mode.
- ◆ Smart Tracking: Only cameras with this function can be used.

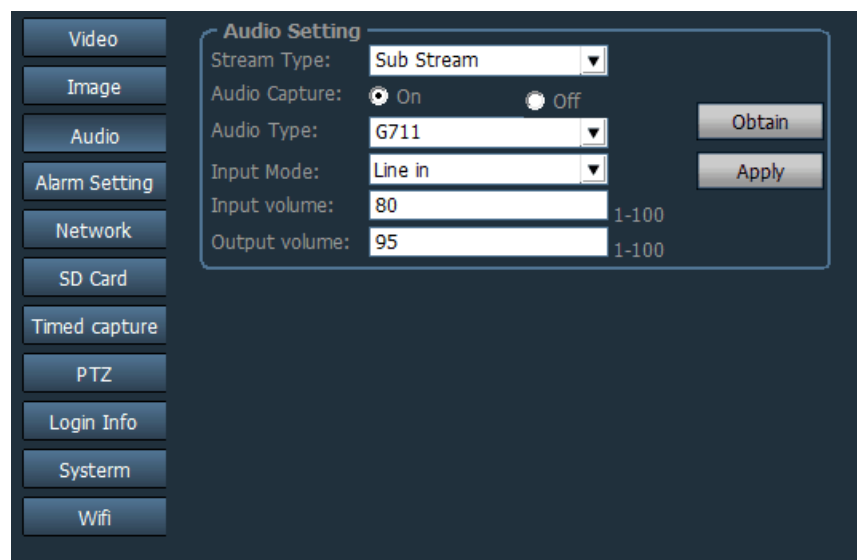

2.9.3. Audio

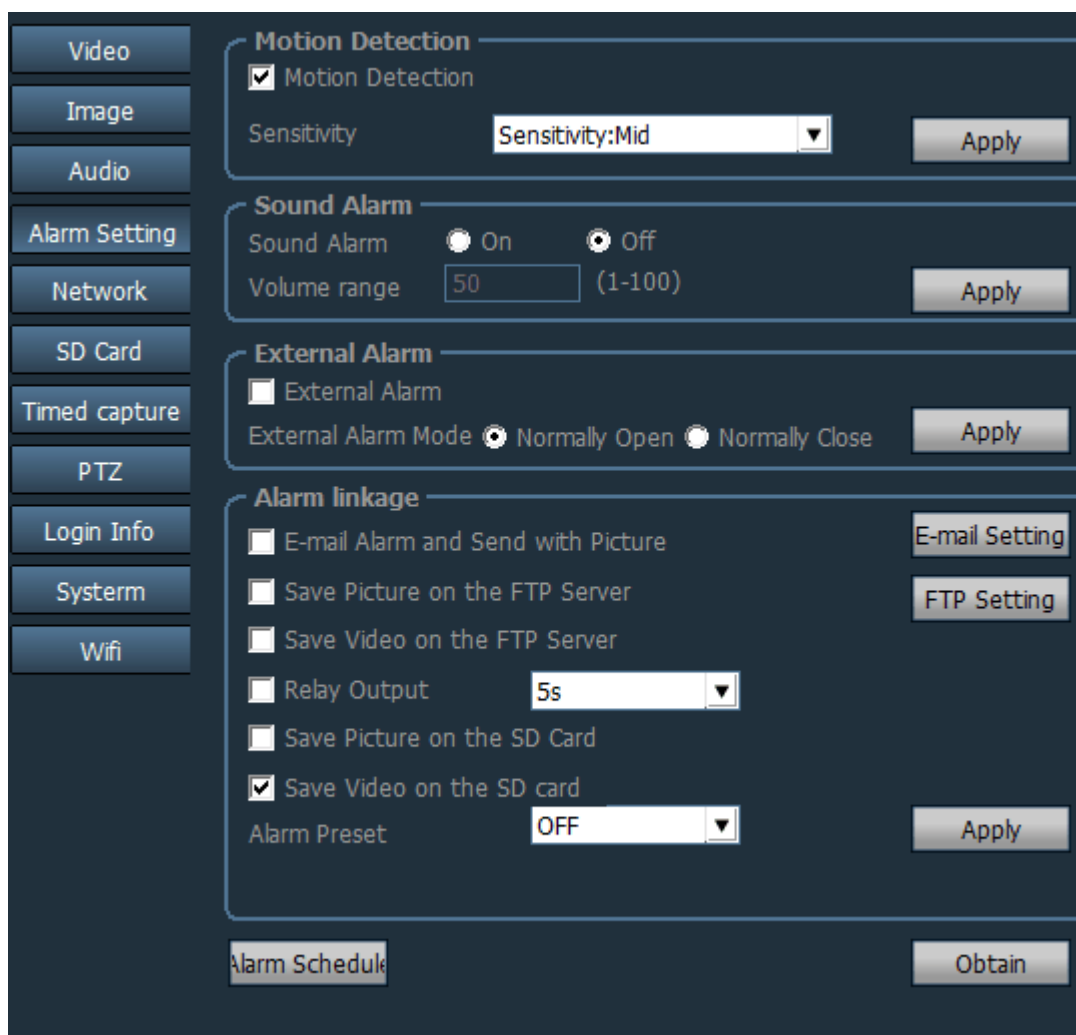

3. Stream type: optional primary stream and secondary stream.
4. Acquire audio: On or Off.
5. Audio Format: Optional G.711 or G.726.
6. Audio input: optional microphone input, linear input.

When microphone input is selected as audio input, the input volume and output volume are 80 and 95 respectively.

When linear input is selected as audio input, the input volume and output volume are 10 and 95 respectively.

2.9.4 Alarm Settings

7.

◆ Motion Detection

Enables and disables the motion detection function: Motion detection box has a tick when motion detection is turned on, and no tick indicates that motion detection is not turned on.

Sensitivity: Selectable sensitivity: low, medium, high; low sensitivity 25; medium sensitivity 50 high sensitivity 75.

◆ Sound Alarm

The sound alarm can be turned on and off; the volume range can be set, optional 1-100, the default is 50.

Note: This function is only supported on some models.

◆ External Alarm

External alarm can be set to always On or always Off; only supported on models with the alarm input and output functions.

◆ Alarm Linkage

You can set:

- ❖ Email alert and send alarm picture
- ❖ Save picture to FTP server
- ❖ Save video to FTP server
- ❖ Relay output
- ❖ Save picture to SD card
- ❖ Save video to SD card
- ❖ Alarm preset

◆ Email Settings

Send email to gmail mailbox as an example:

Smtp server: smtp.gmail.com

Server port: 465

Secure connection: SSL

User name and password fill in account and APP password

Receiving address: mailbox to receive alarm picture

Send address: sender's email address

Subject and information can be filled out as required

After filling in, click on the settings button

For more information, please refer to other manuals

◆ **FTP Settings**

FTP Setting:

FTP Server: Fill in set FTP address

Server port: Fill in FTP port

User name and password: Fill in the username and password settings in the FTP server

Create directory automatically: If you select it, the directory will be created automatically.

The directory name is the day's date

◆ **Alarm Time Settings**

Select List Clear List Obtain Apply

2.9.7 Timed Capture

- 3 Check "Save picture to SD card". When the SD card interval is 60 seconds, it means that every 60 seconds, a picture is taken and saved to the SD card.
- 4 Select "Save picture to FTP server". When the FTP interval is 60 seconds, it means that every 60 seconds, a picture is captured and saved to the specified FTP server.

2.9.8 PTZ Settings

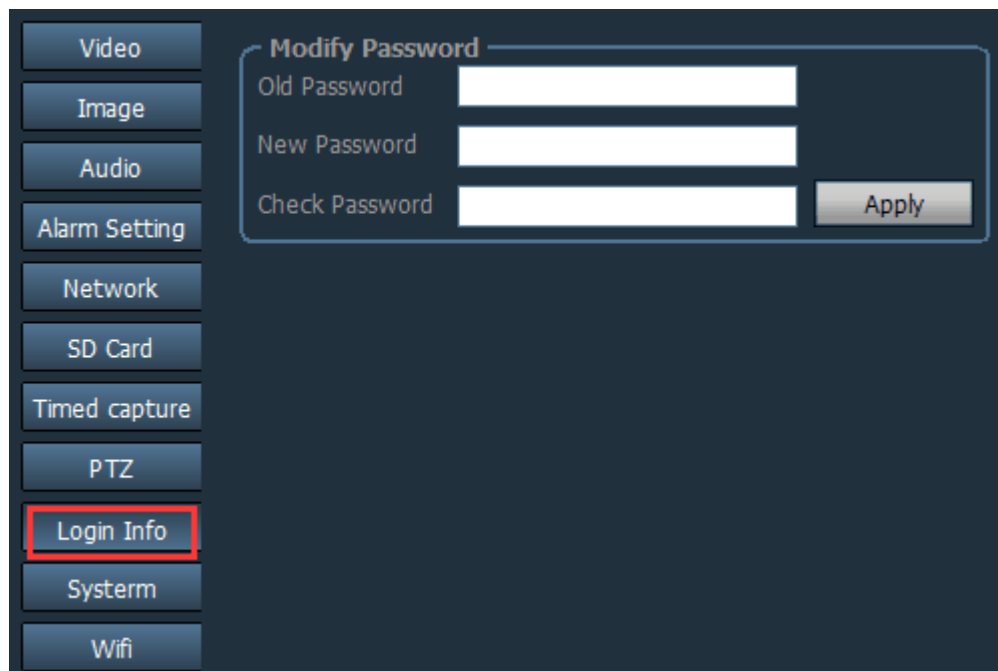

You can set functions such as the number of panoramic sweeps, speed of the pan/tilt, self-check for center, turn off the alarm when the PTZ is in motion, and the indicator display mode.

Note: PTZ setting function, only supported on some models.

2.9.9 Login Information

Password of the device can be changed.

The screenshot displays a web interface with a sidebar menu on the left and a main content area. The sidebar menu includes the following items: Video, Image, Audio, Alarm Setting, Network, SD Card, Timed capture, PTZ, Login Info (highlighted with a red box), System, and Wifi. The main content area shows the 'Modify Password' form, which contains three input fields: 'Old Password', 'New Password', and 'Check Password'. An 'Apply' button is located to the right of the 'Check Password' field.

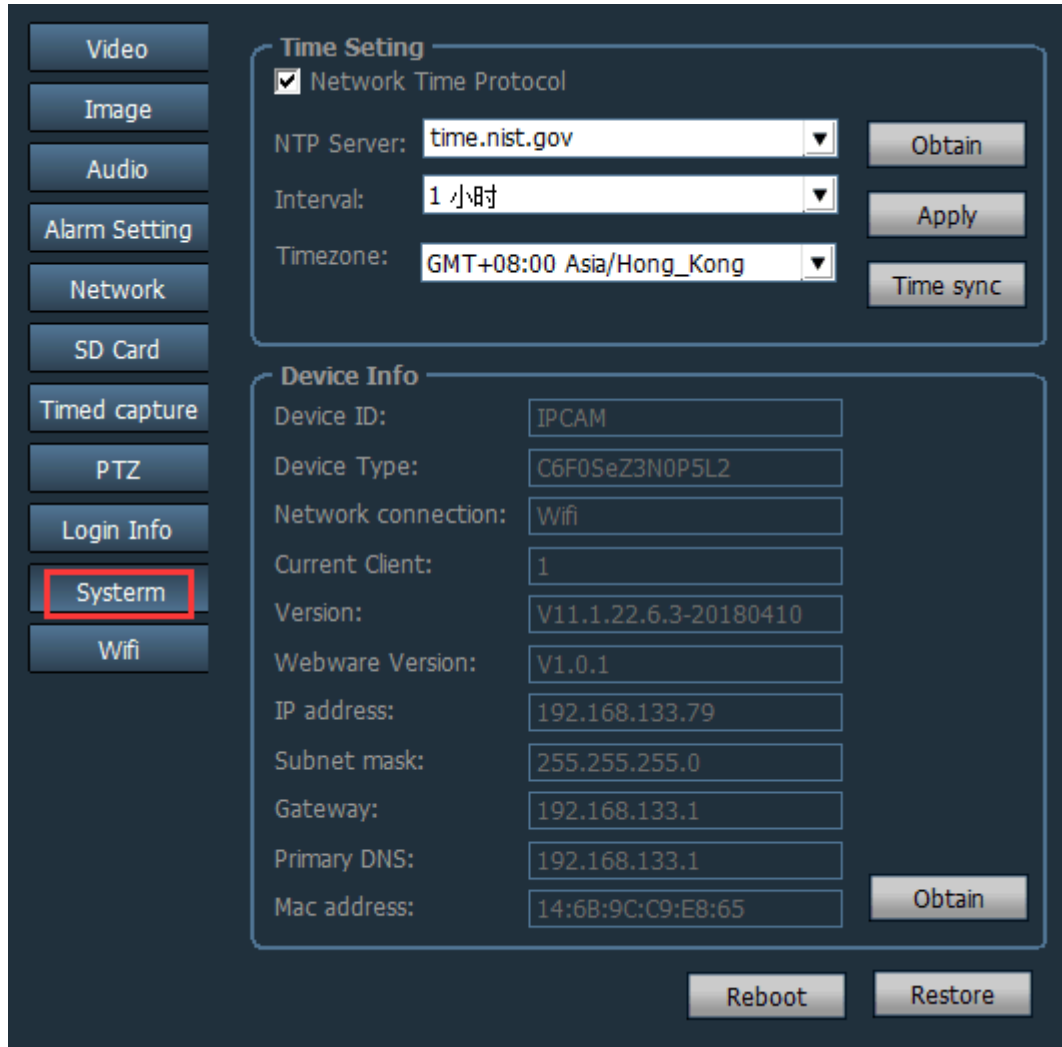

2.9.10 System

- Network time synchronization

Set NTP server, synchronization interval, time zone, etc.

- Device information

Get current information of the device; including the device name, software version, IP address, MAC address, etc.; restart the device and restore to factory settings

2.9.11 Wireless connection

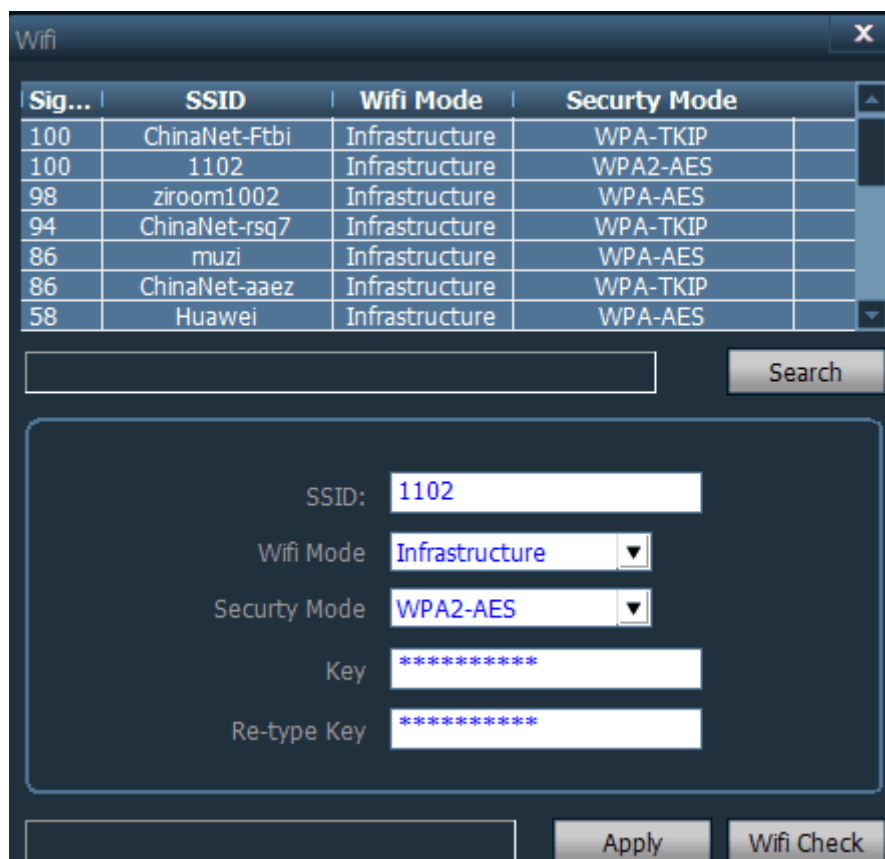

Steps to set up WI-FI:

Step 1: Click on the wireless connection, click on the search for WIFI signal

Step 2: Double-click the SSID number of the WIFI used

Step 3: Enter the WIFI password key

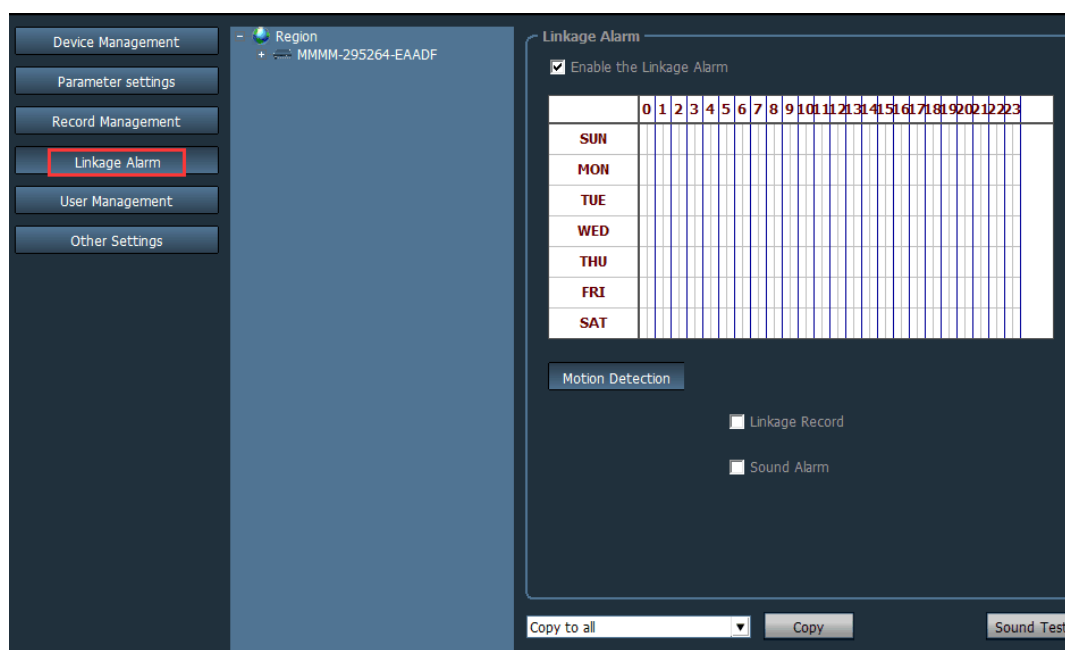

Step 4: Click the Setup button, when it indicates that setting is successful, then click the WI-FI test button, confirms that the setting is successful, and then finally unplug the device network cable

2.10 Alarm Linkage

Select the camera to be set, turn on the alarm linkage, select the alarm linkage time, you can then set the alarm linkage video and sound alarm.

If there is a motion detection alarm, the motion detection alarm video will be stored by default in the D drive.

2.11 User Management (optional)

The factory default administrator username is admin, and the password is blank. Administrators can add users, delete users, and set user rights after logging in. User rights include: admin, user and guest.

Admin rights: Administrator rights for device management, user management, video monitoring, video playback, map settings, log query, user switching, and client exit.

User rights: Can carry out video surveillance, video playback, map settings, log viewing, user switching and password change.

Guest rights: Can monitor video, switch users and change passwords.

2.11.9 Add user

Step 1: After logging in with the admin user, select Settings - User Management in the tab bar.

Step 2: Click the "Add" button, enter the user name and password and select the user's permissions.

Step 3: Click "Save" button, the user is added successfully.

2.11.10 Delete user

Step 1: After logging in with the admin user, select Settings - User Management in the tab bar.

Step 2: Select user to be deleted and click "Delete" button

2.11.11 Modify user rights

Step 1: After logging in with the admin user, select Settings - User Management in the tab bar.

Step 2: Select user and click "Edit" button
